

## **AMENDMENTS TO THE CLAIMS:**

The listing of claims will replace all prior versions, and listings of claims in the application:

### **LISTING OF THE CLAIMS**

1. (Original) A border lighting strip comprising:  
an electrical cable including a plurality of electrical conductors;  
a plurality of light emitting devices (LEDs) arranged alongside the electrical cable and electrically connected thereto; and  
a sheath at least partially made from a light transmissive material, said sheath having a hollow region adapted to receive the LEDs, and an integrally formed cylindrical lens arranged to optically cooperate with the LEDs.
2. (Original) The border lighting strip as set forth in claim 1, wherein the sheath includes:  
an extruded length of light transmissive material of high refractive index.
3. (Original) The border lighting strip as set forth in claim 1, wherein the sheath includes:  
an extruded length of a wave guiding material.
4. (Original) The border lighting strip as set forth in claim 1, wherein the plurality of LEDs are arranged such that they face the same direction.
5. (Original) The border lighting strip as set forth in claim 4, wherein the cylindrical lens is arranged parallel to the cable such that the plurality of LEDs face the cylindrical lens.
6. (Original) The border lighting strip as set forth in claim 1, wherein each LED has associated therewith a lead frame which provides for electrical connection of the LED to the cable.
7. (Original) The border lighting strip as set forth in claim 1, further including:

a plurality of LED sockets that receive the LEDs and effectuate connection of the LEDs to the cable.

8. (Original) The border lighting strip as set forth in claim 1, further including:

a plurality of crimps corresponding to the plurality of LEDs which electrically and mechanically connect the LEDs to the electrical cable.

9. (Original) The border lighting strip as set forth in claim 1, wherein: the light emitting devices (LEDs) include light emitting diodes.

10. (Original) The border lighting strip as set forth in claim 9, wherein the light emitting diodes are selected from a group consisting of:

phosphide-based red light emitting diodes,  
blue or blue/green nitride-based light emitting diodes, and  
phosphor-coated UV light emitting diodes emitting white or other colored

light.

11. (Currently Amended) A linear lamp comprising:

an essentially hollow tube ~~of translucent or transparent material~~ including an extended cylindrical lens having a length substantially coextensive with a length of the hollow tube, wherein the tube and the lens are integrally formed by a single extrusion;

a plurality of light emitting elements arranged within the tube and optically coupled with the extended cylindrical lens; and

at least one electrical wire arranged within the tube for supplying electrical power to the light emitting elements.

12. (Previously Amended) The linear lamp as set forth in claim 11, wherein the extended cylindrical lens defines a wave guide portion that distributes light generated by the light emitting elements along the tube.

13. (Previously Amended) The linear lamp as set forth in claim 11, wherein the extended cylindrical lens refracts light generated by the light emitting elements in a plane perpendicular to the tube.

14. (Original) The linear lamp as set forth in claim 11, further including:  
a plurality of conductors that electrically and mechanically connect the  
light emitting elements to the at least one electrical wire.

15. (Currently Amended) The linear lamp as set forth in claim 11,  
wherein:  
the tube of ~~translucent or transparent material~~ is flexible whereby the  
linear lamp is flexible and arrangeable in a non-straight orientation.

16. (Previously Amended) A lighting strip comprising:  
a cord including a plurality of parallel conductive wires and an insulating  
coating;  
a plurality of light emitting elements affixed to the cord and arranged to receive  
electrical power therefrom; and  
an at least partially light-transmissive tube surrounding the plurality of light  
emitting elements and at least a portion of the cord, the light-transmissive tube including  
an integral optical element that distributes light emitted by the plurality of light emitting  
elements along the lighting strip.

17. (Canceled)

18. (Previously Amended) The lighting strip as set forth in claim 16,  
wherein the integral optical element includes:  
a lens integrally formed with the tube that optically communicates with the  
plurality of light emitting elements.

19. (Original) The lighting strip as set forth in claim 16, wherein the light  
emitting elements include light emitting diodes.

20. (Original) The lighting strip as set forth in claim 16, further including:  
at least one mount that attaches the light emitting elements to the cord.

21. (Original) The lighting strip as set forth in claim 16, wherein the tube is  
formed by an extrusion molding.

22. (Original) The lighting strip as set forth in claim 16, wherein the tube includes a color tinting.

23. (Previously Amended) A method for manufacturing a lighting strip, the method comprising:

electrically connecting a plurality of light emitting devices to an electrical cable to form a linear light source;

extruding a transparent or translucent sheath adapted to receive the linear light source;

simultaneously with the extruding of the sheath, extruding an integral optical element parallel to and formed with the sheath; and

inserting the linear light source into the extruded sheath with the linear light source arranged to be in optical communication with the optical element.

24. (Previously Amended) The method as set forth in claim 23, wherein the extruding of an integral optical element includes:

extruding a cylindrical lens integrally with the extruding of the sheath.

25. (Original) The method as set forth in claim 23, wherein electrically connecting includes:

attaching a mount to the electrical cable, which attaching includes an electrical connection between the mount and the cable; and

physically and electrically bonding one of the light emitting devices to the mount.

26. (Original) The method as set forth in claim 23, wherein electrically connecting includes:

crimping electrical leads of one of the light emitting devices to the electrical cable to establish an electrical connection therebetween; and

repeating the crimping for each of the plurality of light emitting devices.
